RTI Queries

Number 3: Information on the number of labs available in India for checking the quantity of pesticide in soil may be obtained from Central Fertilizer quality Control and Training Institute, Faridabad. Regarding fertilizers, it may be of single or multi nutrient element composition and once applied in soil, the nutrient element present in the fertilizer is released either as ionic or elemental form in soil. Hence, the nutrient element present in the soil may be quantified rather than quantifying the fertilizer per se in soil. In India, labs are available for testing soil and fertilizers for its elemental composition. Around 1049 soil testing laboratories are available for soil nutrient analysis and 74 fertilize quality control lab for fertilizer material analysis (based on report from Department of Agriculture and Cooperation, 2010-11).

Number 5: There are reports available regarding nitrate and ground water pollution. In some district, where high nitrogenous fertilizers were used, higher nitrate content in the ground water was observed. Reports on nitrate contamination in ground water can be obtained from Central Pollution control Board.
